Example: Balancing Chemical Equations

We want to know how much ethanol is produced by fermentation (for science)

The number of atoms has to be preserved on each side of the equation

$$C_6H_{12}O_6 \rightarrow C_2H_5OH + CO_2$$

Glucose   Ethanol

Example: Balancing Chemical Equations

$$C_6H_{12}O_6 \rightarrow C_2H_5OH + CO_2$$

Glucose   Ethanol

We want to know how much ethanol is produced by fermentation (for science)

The number of atoms has to be preserved on each side of the equation

Balancing Chemical Equations

$$\alpha C_6H_{12}O_6 \rightarrow \beta C_2H_5OH + \gamma CO_2$$

Glucose   Ethanol
