Question

Describe how to perform substitution (substituting a variable in one equation with the its value in another equation) via row operations

Elementary Row Operations

scaling   multiply a row by a number

interchange   switch two rows

replacement   add two rows (and replace one

                                with the sum)

rep. + scl.   add a scaled equation to another
